Networked Systems

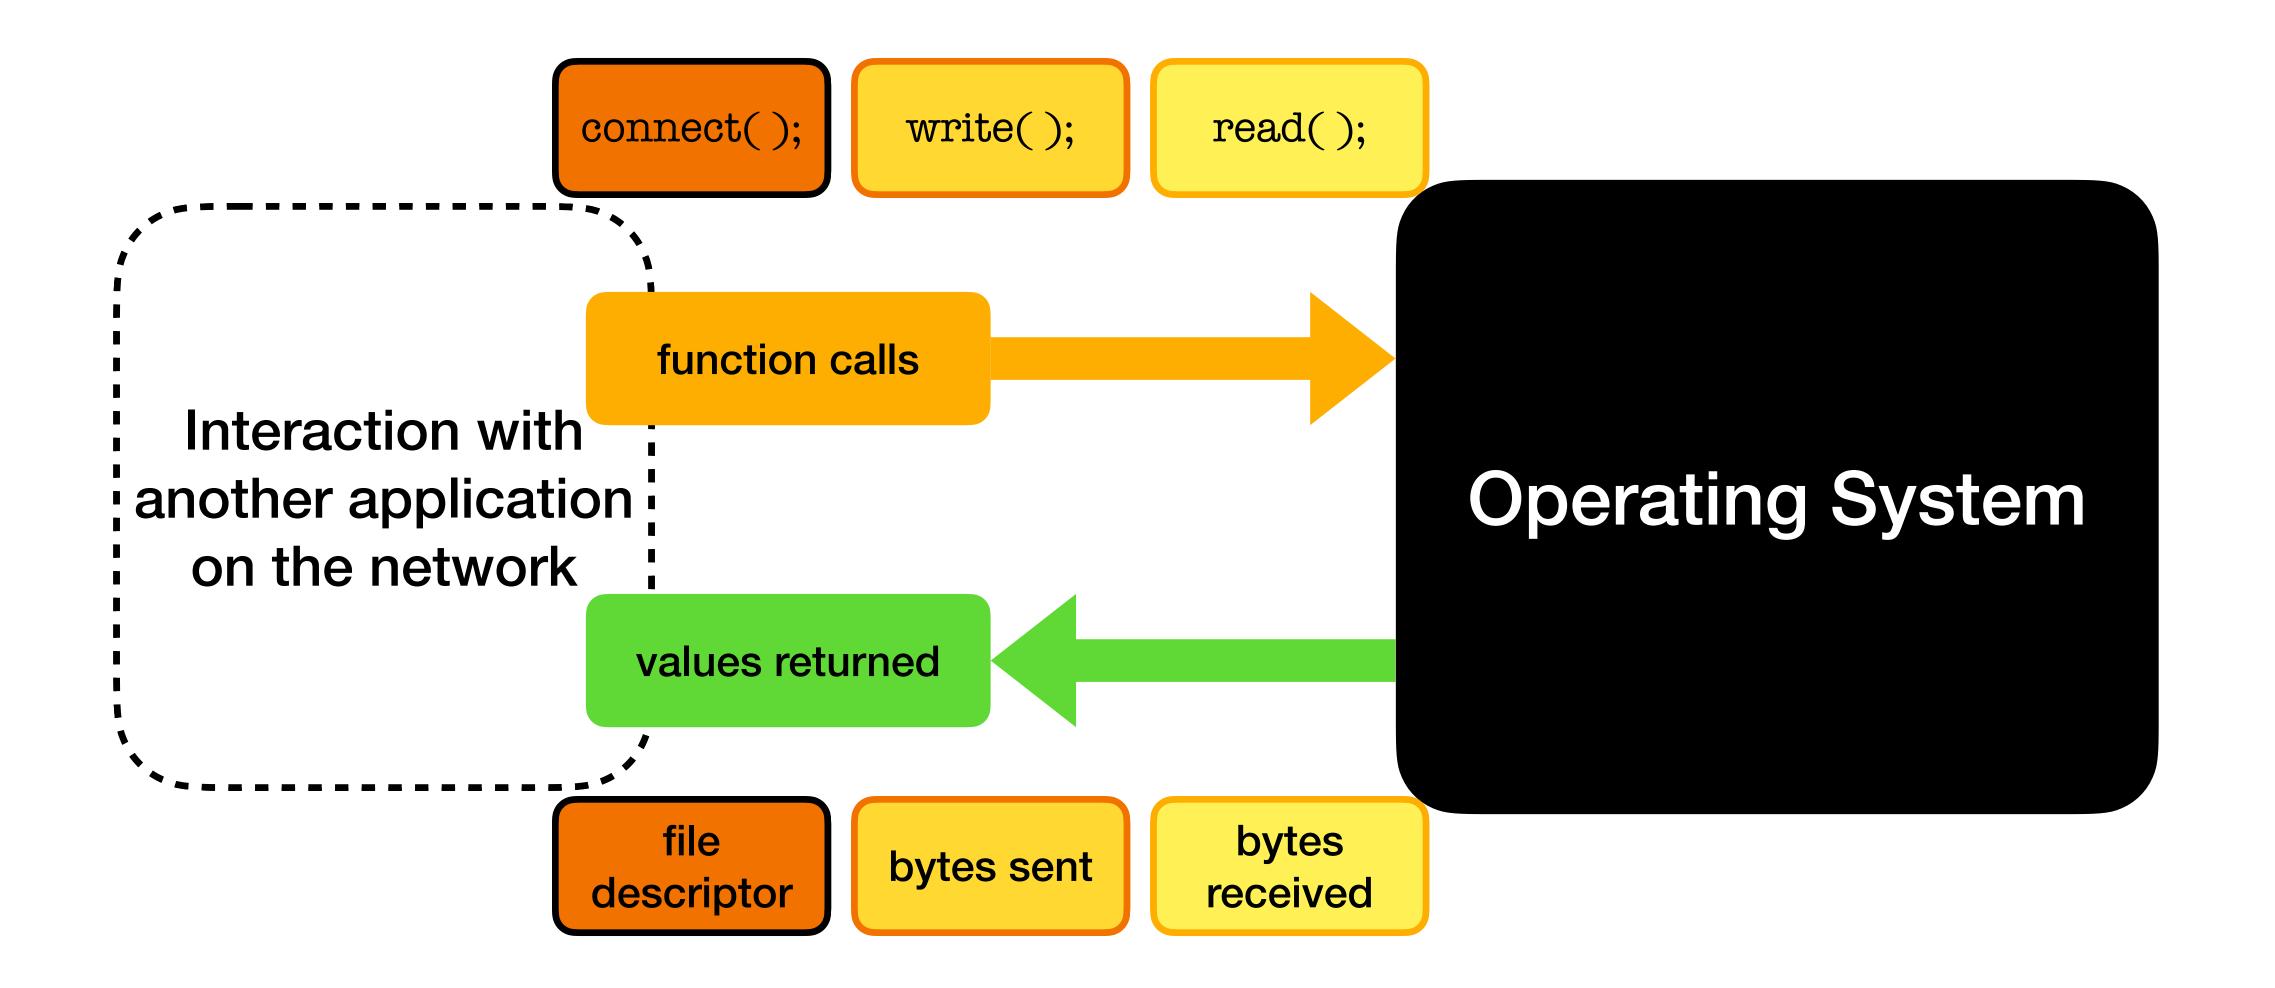

CS105, Fall 2024

Outline

- Networked Systems
- Components of a Networked System
- Protocols for Networking

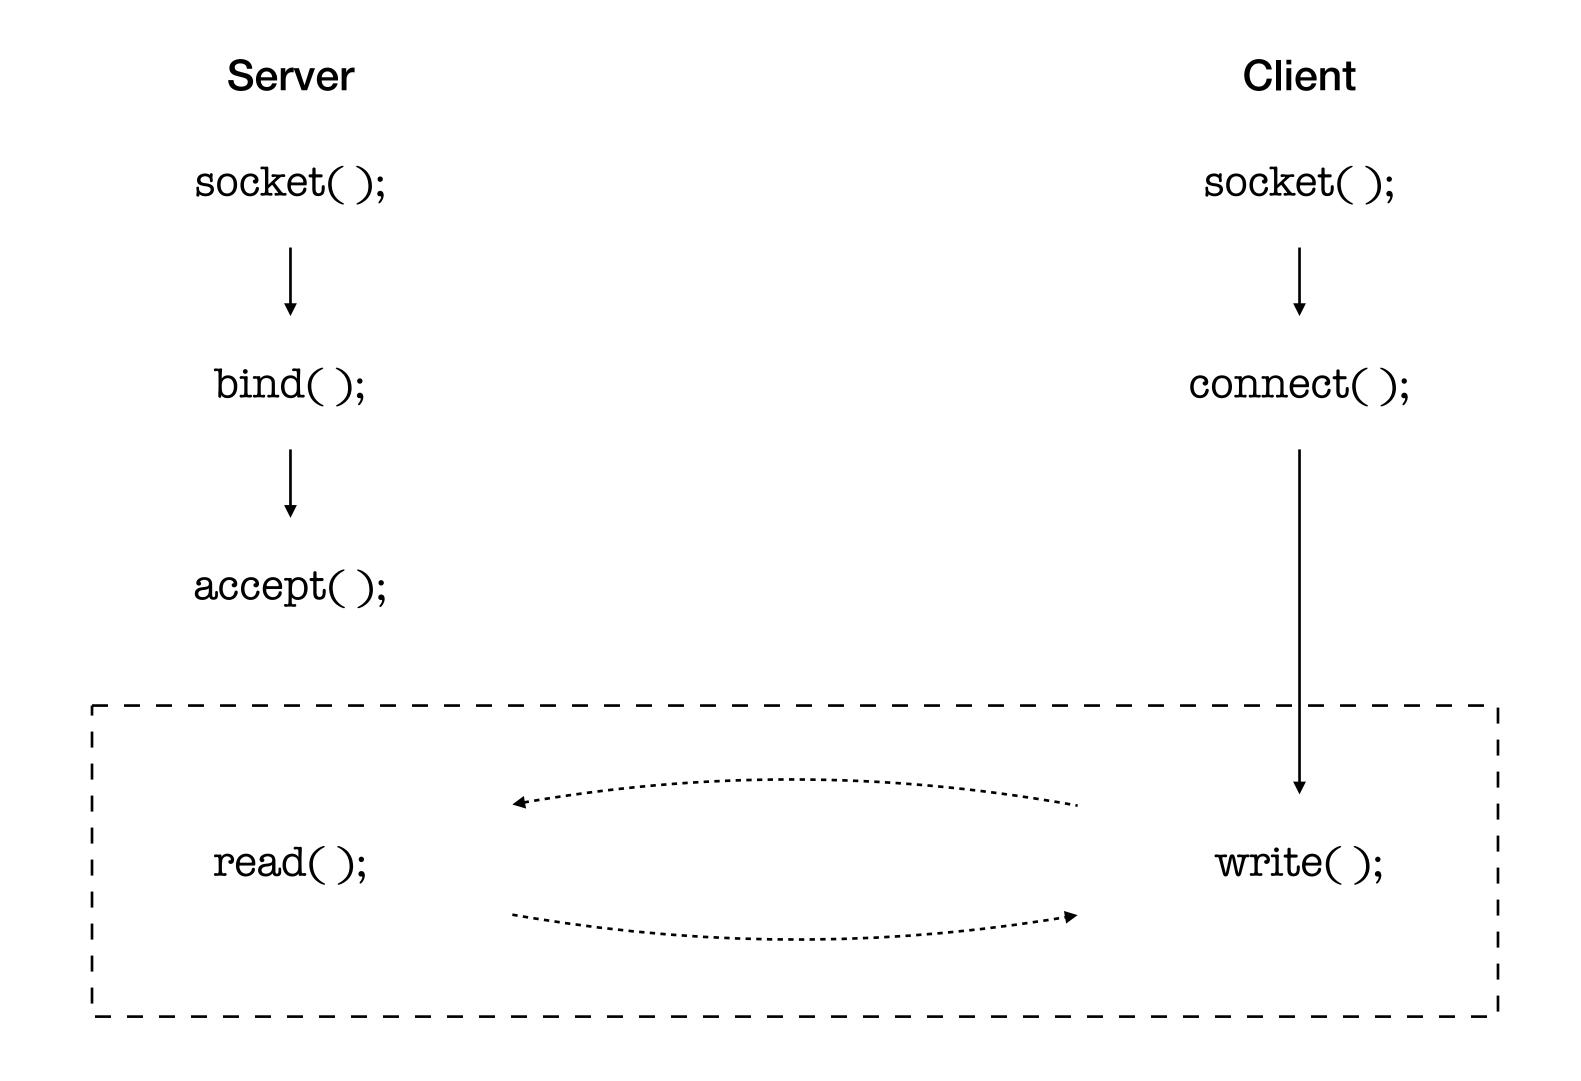

Part 1: Networked Systems

Nov 18, 2024

Client/Server Networked System

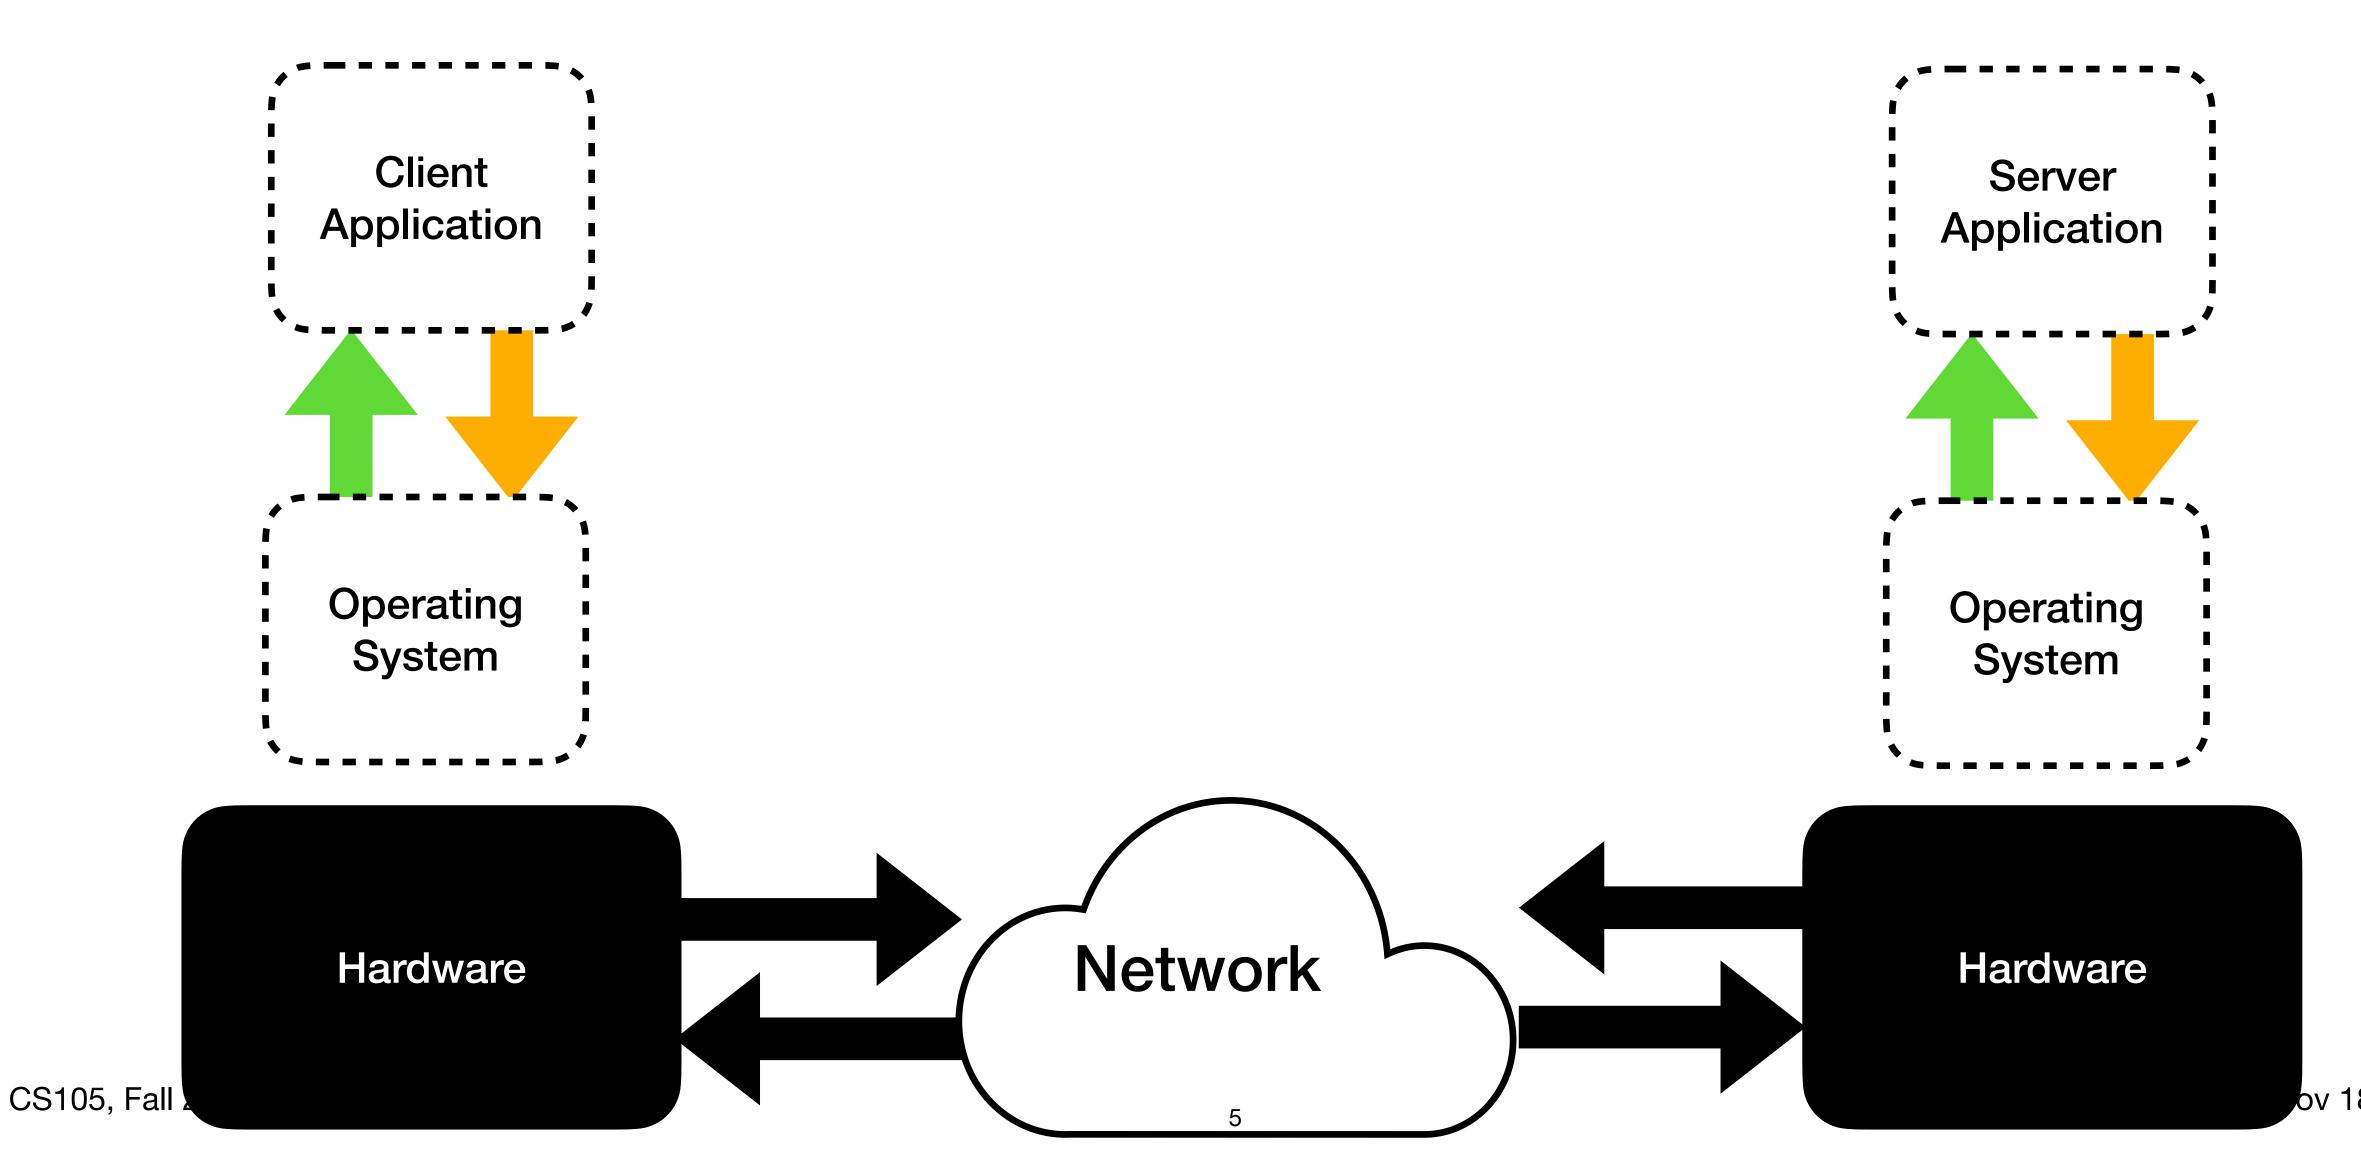

CS105, Fall 2024

Part 1: Networked Systems

Nov 18, 2024

Client/Server Networked System

Part 1: Networked Systems

bv 18, 2024

Chat with your neighbor!

What are some examples of networked systems?

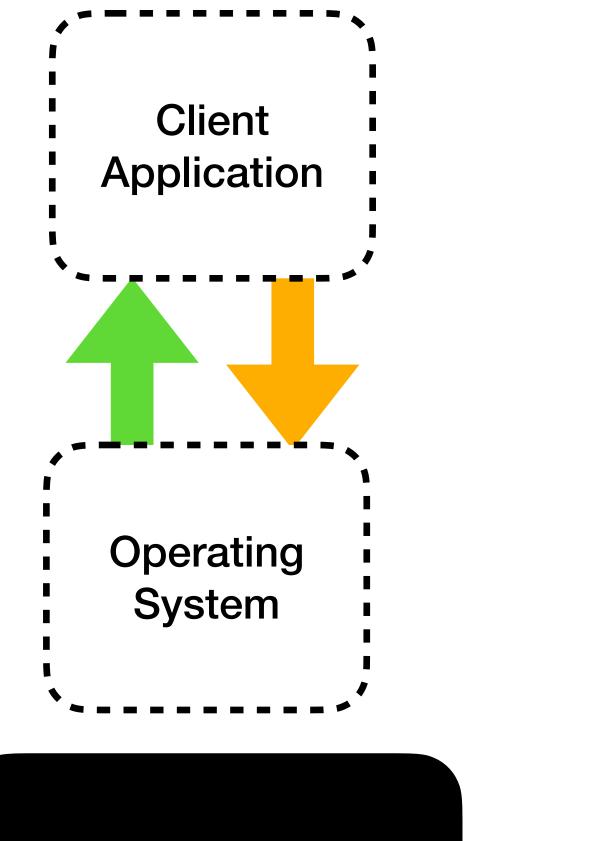

CS105, Fall 2024

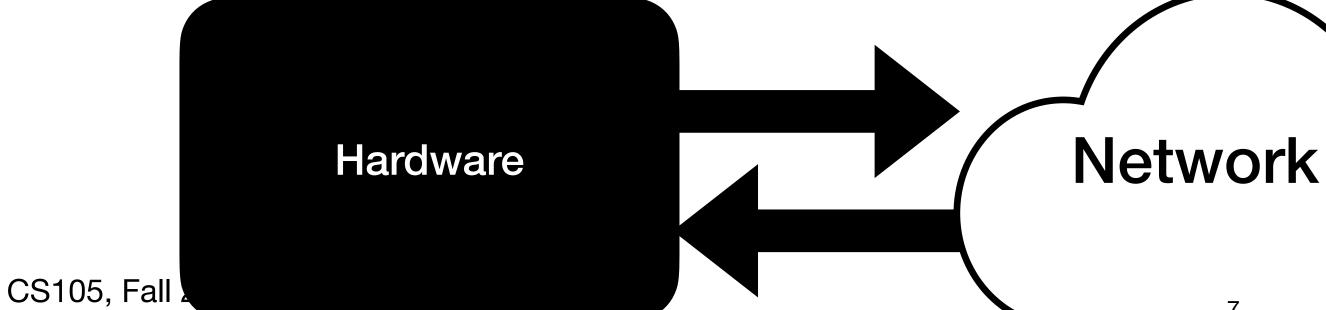

Part 1: Networked Systems

Nov 18, 2024

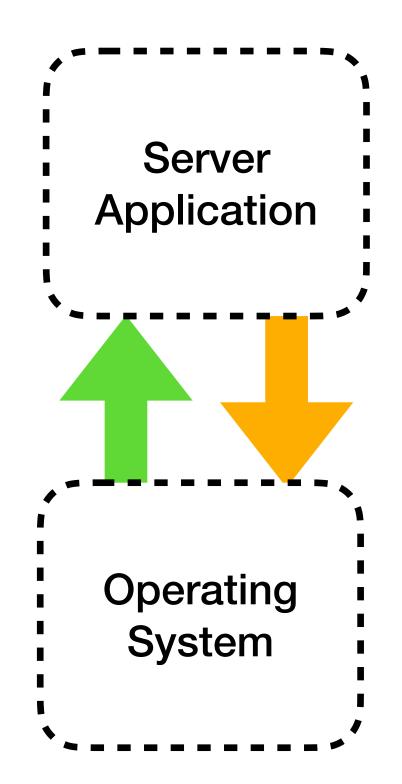

What is what in your networked system?

Part 1: Networked Systems

To know what to send, we need to understand the components!

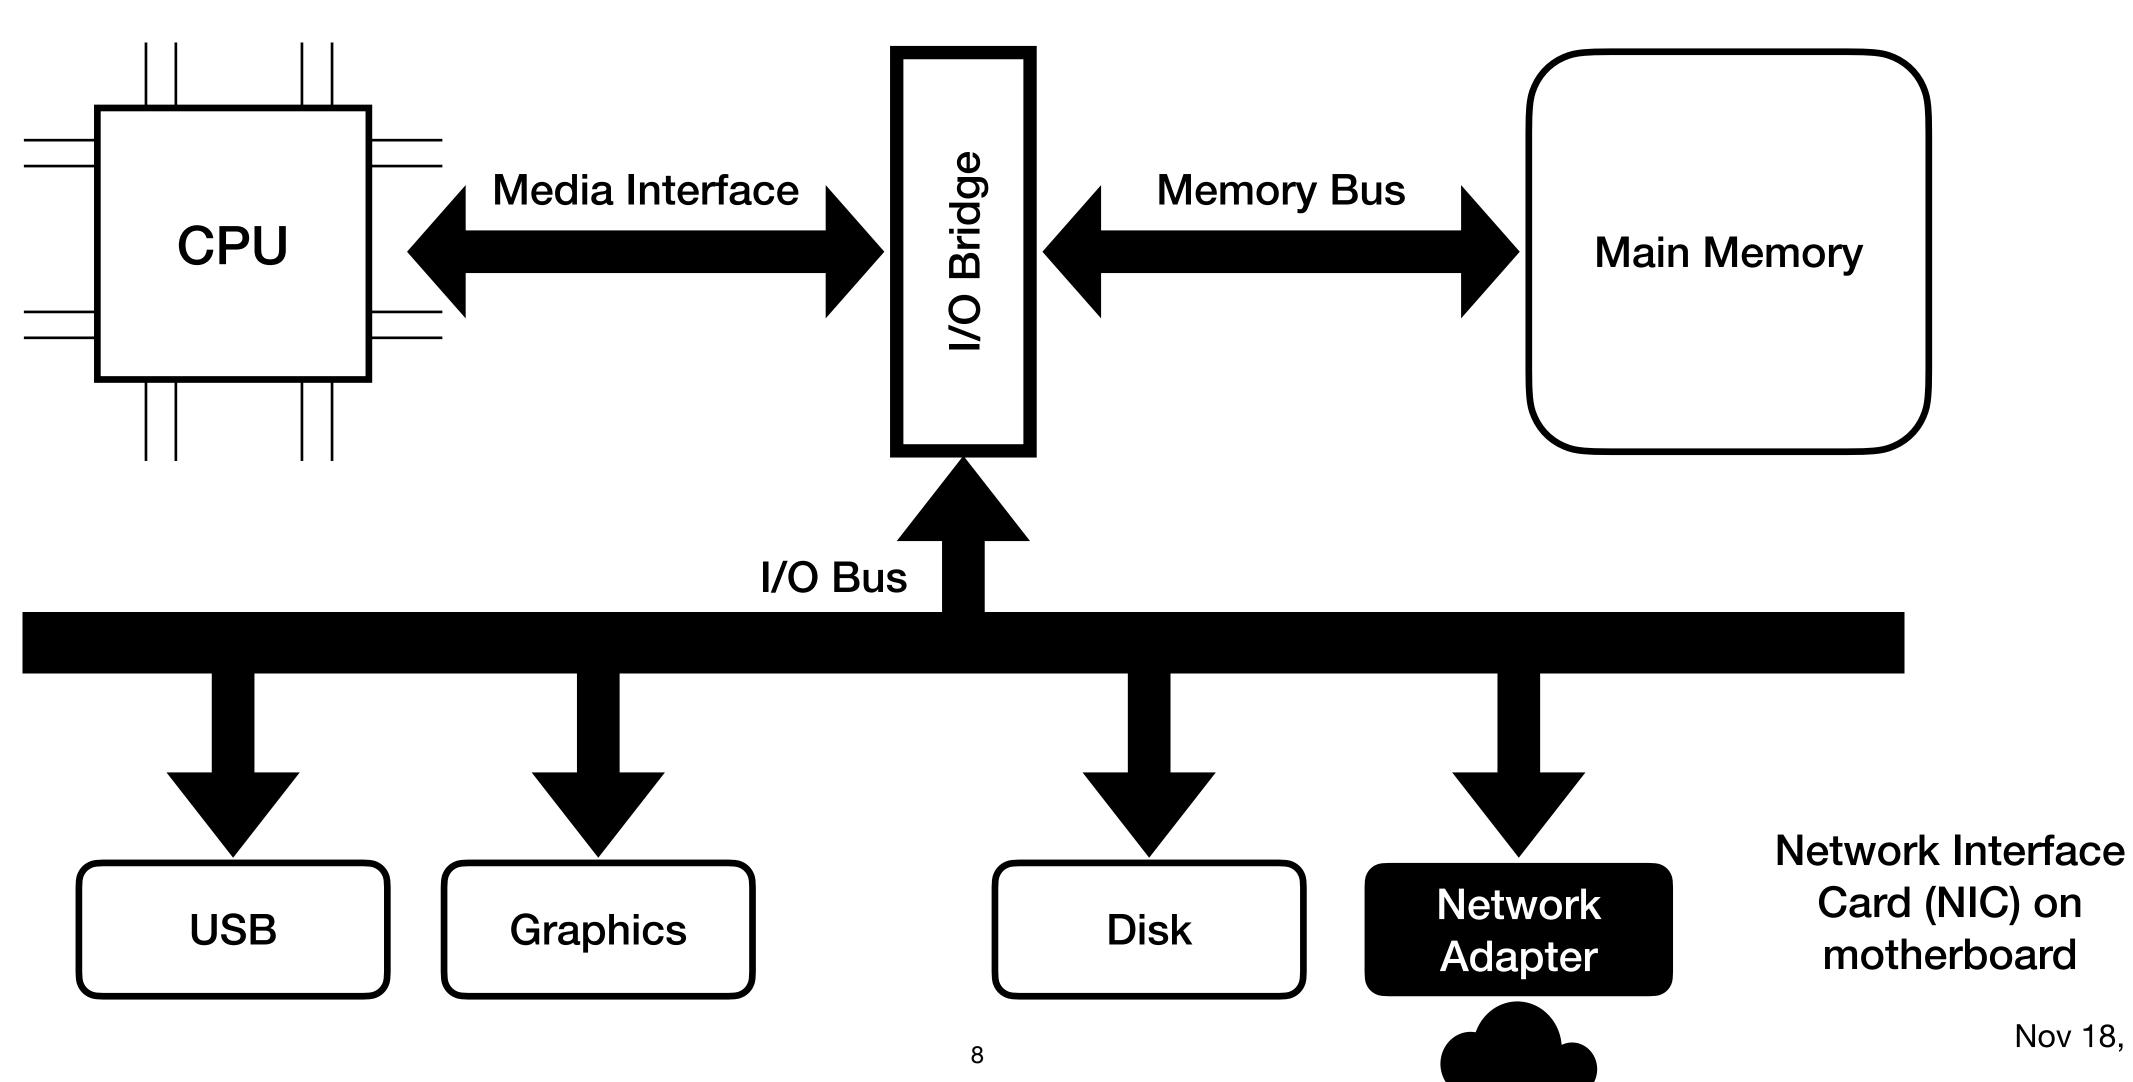

Hardware

ov 18, 2024

Networking Architecture

CS105, Fall 2024

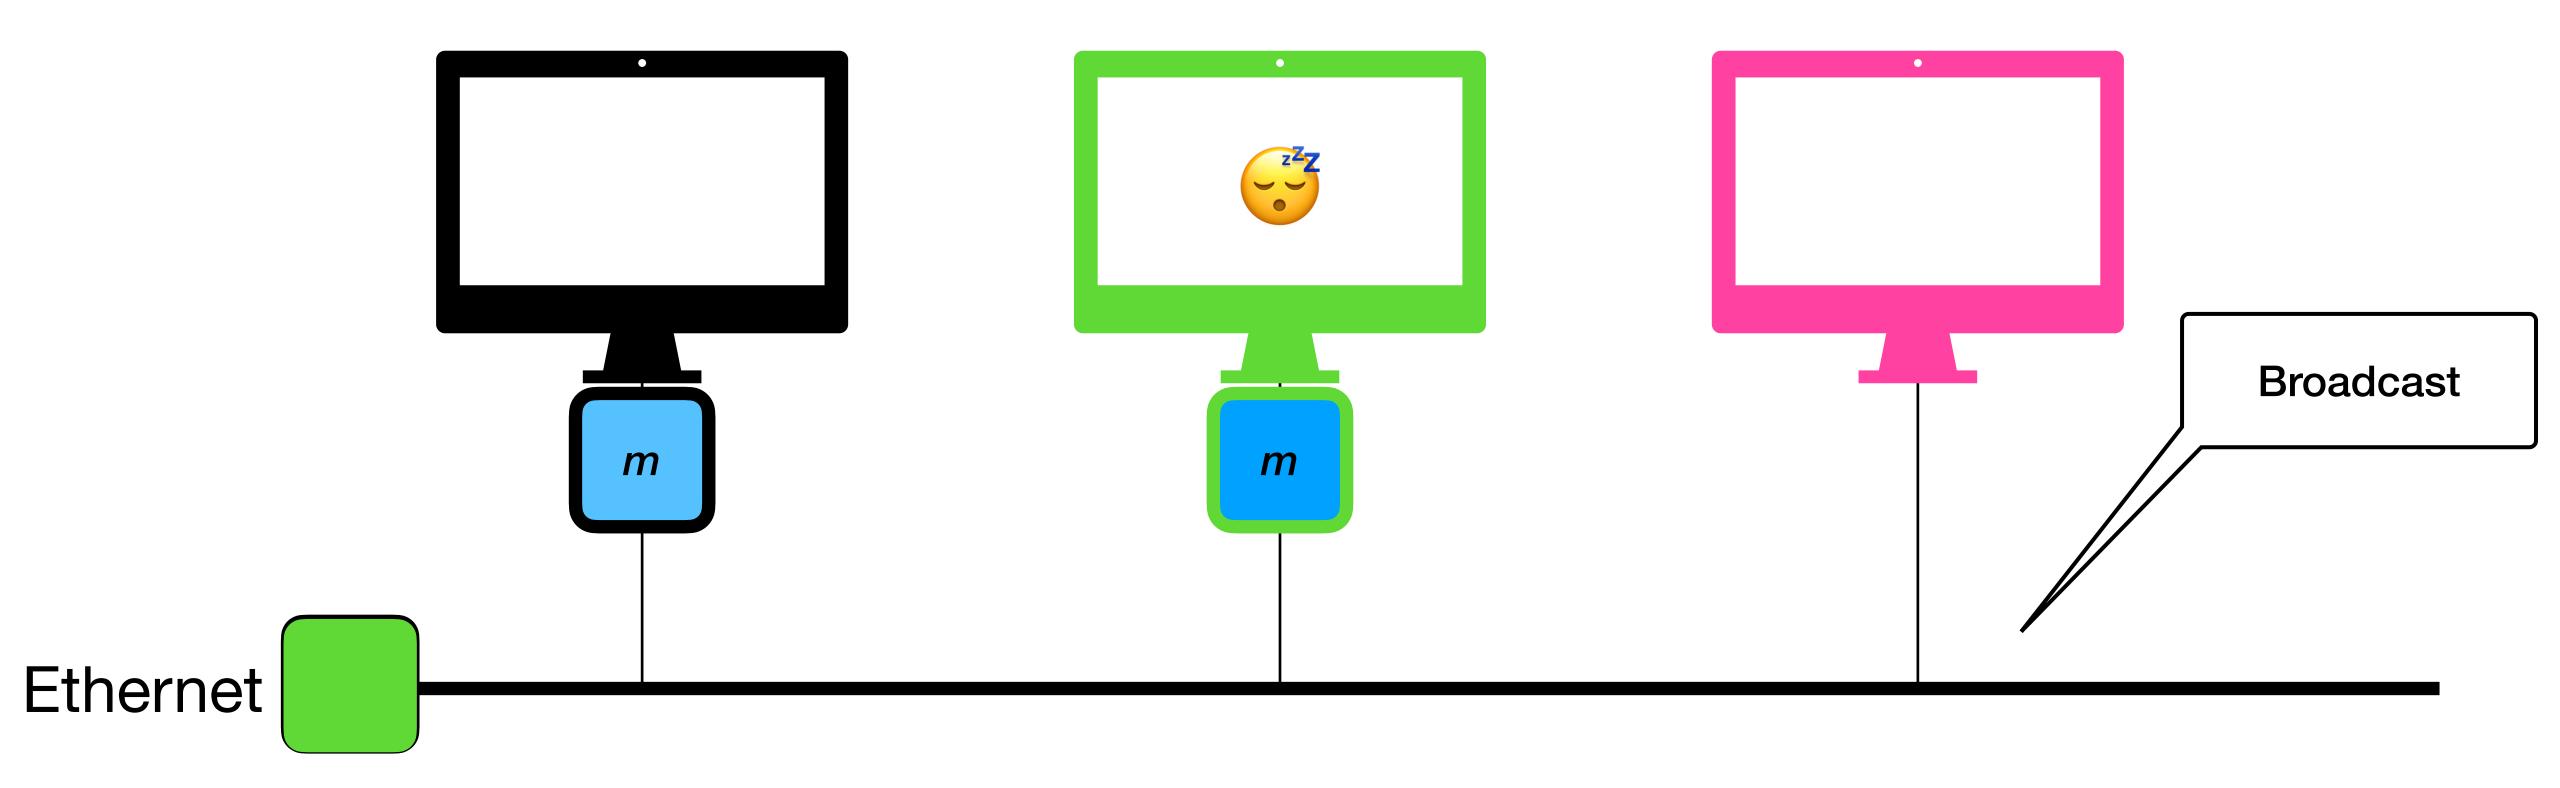

Part 2: Components of a

Wired Network Example

CS105, Fall 2024

Part 2: Components of a

Wired Network Example

- To communicate, they:
 - Try to listen for traffic from others
 - If quiet, try to acquire "ownership" of wire
- In case of collision: stop, sleep, retry

Small networked systems can use wires (i.e., ethernet) to be linked together

Sometimes referred to as a local area network (LAN)

Broadcast message to other members of the networked system

Chat with your neighbor!

What are some advantages and disadvantages of wired networks?

CS105, Fall 2024

Part 2: Components of a

Wired Network Summary

Completely decentralized!

Inexpensive!

CS105, Fall 2024

Part 2: Components of a

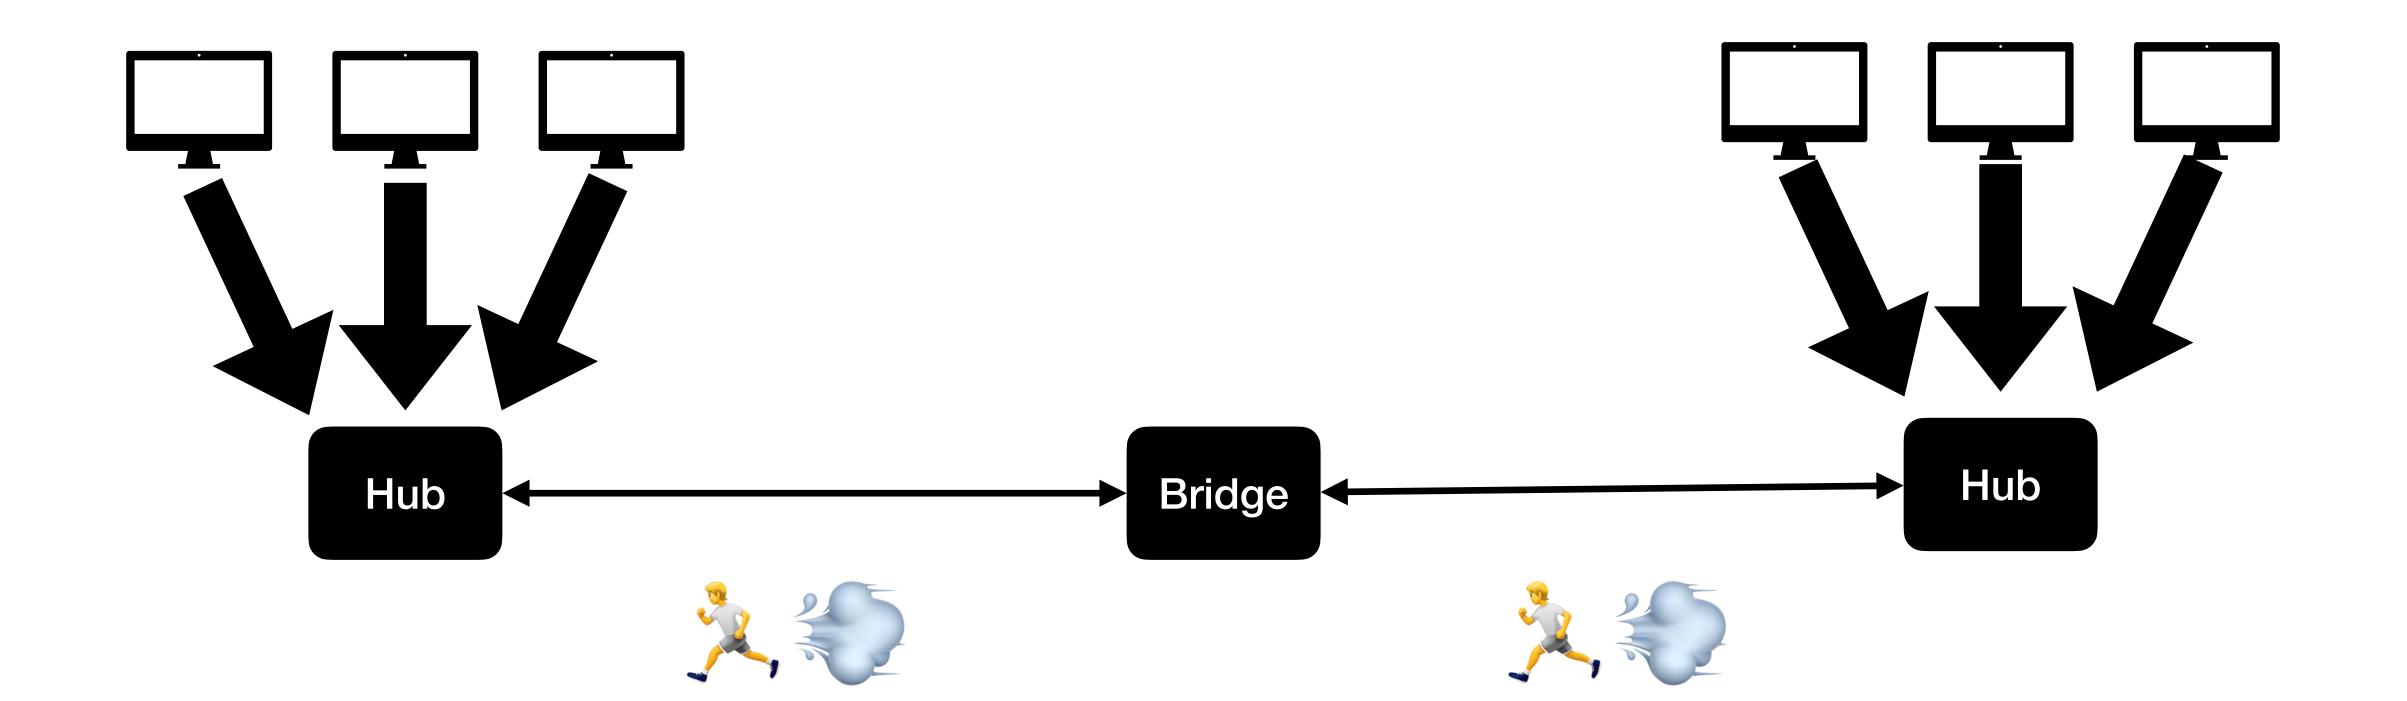

Everyone can see all of the data...

Does not scale well!

Internetwork Example 1

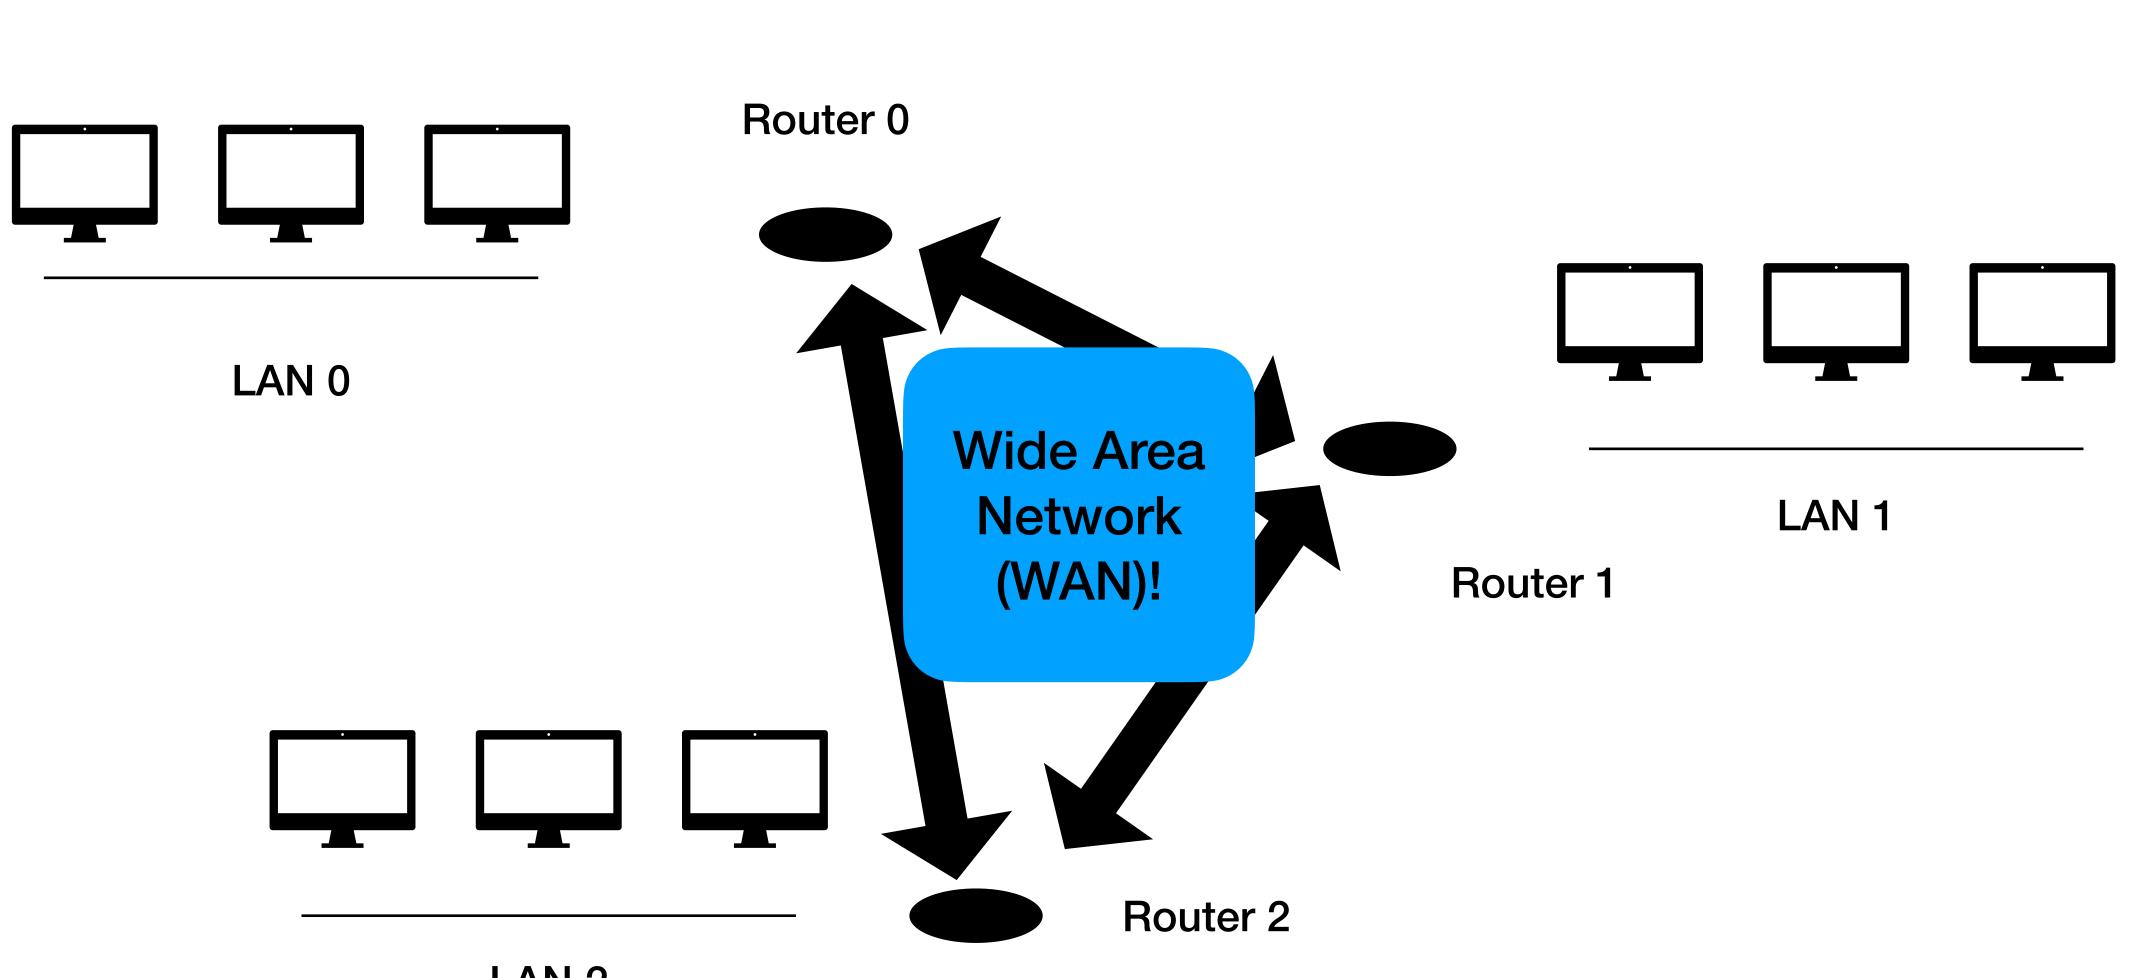

CS105, Fall 2024

Part 2: Components of a

Internetwork Example 2

LAN 2

CS105, Fall 2024

Part 2: Components of a

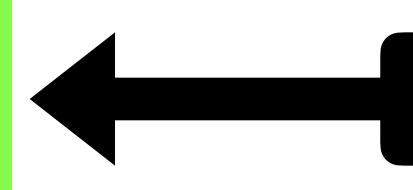

Data Encapsulation Layers

CS105, Fall 2024

what goes in here?

Application Layer

- In order to make some request, clients and servers need to agree on a *protocol* to make requests and responses
- Examples:

. . .

- HTTP: HyperText Transport Protocol
- SSH: Secure SHell
- SMTP (email): Simple Mail Transport Protocol

Part 3: Protocols for

Application Layer, HTTP

- Typical client request types
 - GET: request data from the source
 - POST: send some data to a server to change the state
- Typical server responses
 - Status line lacksquare
 - HTTP headers summarizing the data
 - Requested data (optional)

CS105, Fall 2024

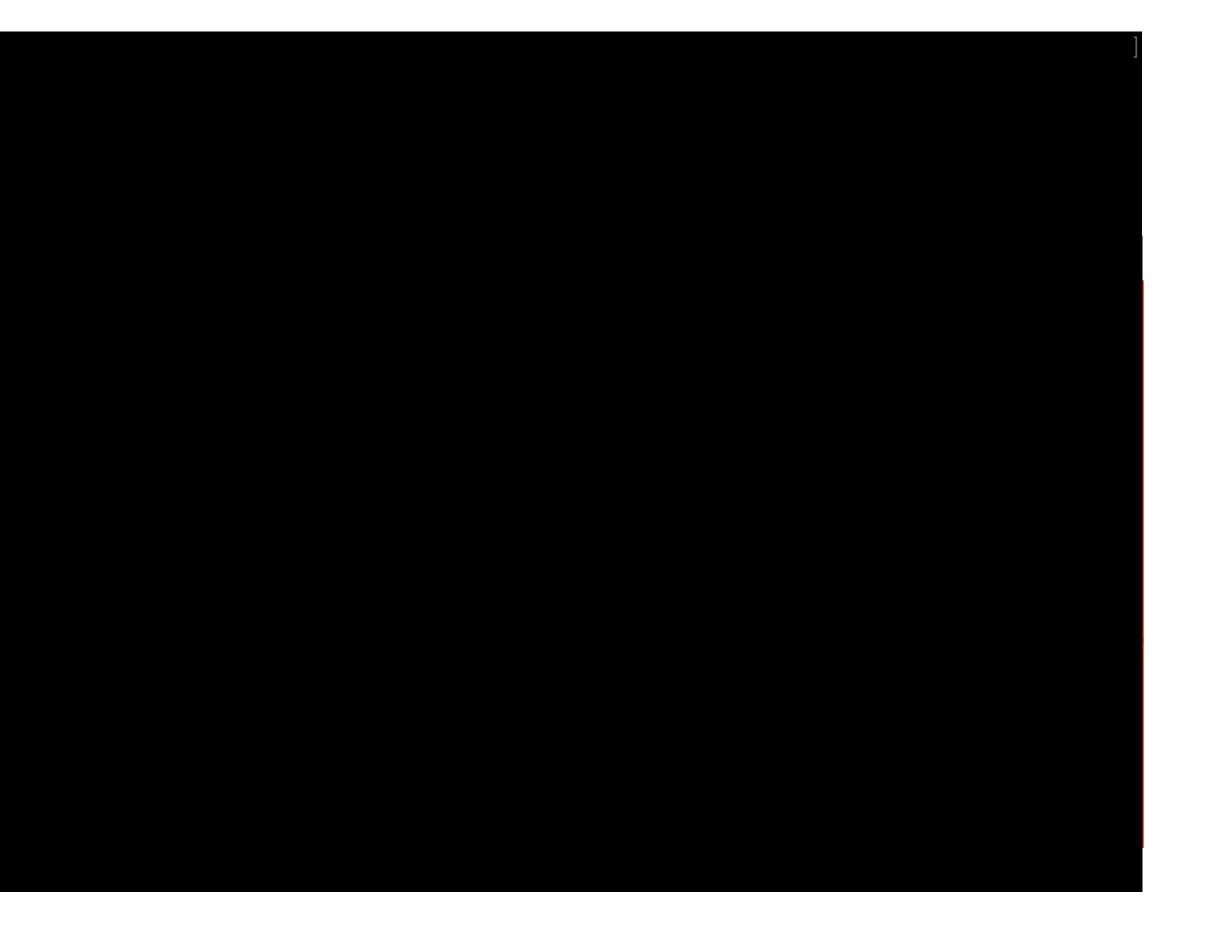

Part 3: Protocols for

HTTP Example!

Sams-MacBook-Pro-92:Brown samthomas\$ telnet google.com 80 Trying 2607:f8b0:4006:820::200e... Connected to google.com. Escape character is '^]'. GET / HTTP/1.1 Host: google.com

Part 3: Protocols for Networking

Chat with your neighbor!

Suppose you want to upload a file to Google Drive. Describe the client/server request/response!

CS105, Fall 2024

Part 3: Protocols for

Data Encapsulation Layers

HTTP Headers

CS105, Fall 2024

Part 3: Protocols for

Networking

Nov 18, 2024

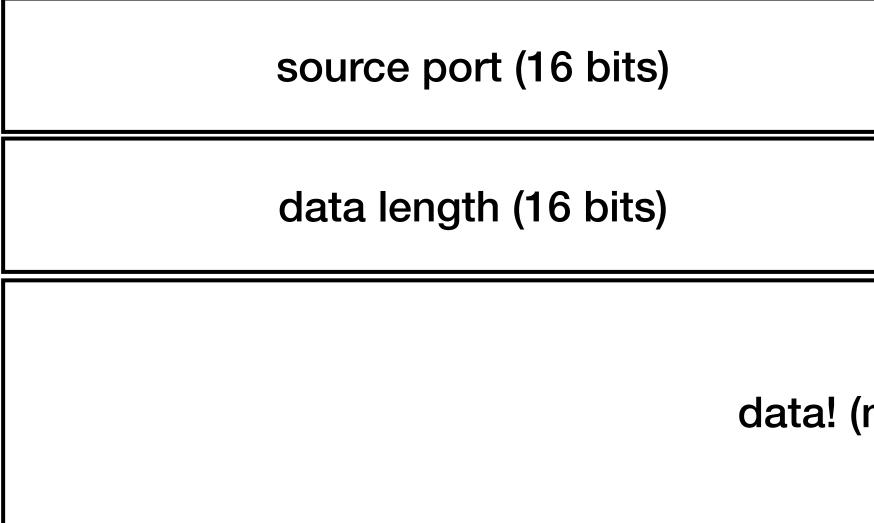

Transport Layer

- Application requests are broken up into packets that get sent over the network
- Examples:
 - UDP: User Datagram Protocol
 - TCP: Transmission Control Protocol

Part 3: Protocols for

Transport Layer, UDP

CS105, Fall 2024

Part 3: Protocols for Networking

destination port (16 bits) checksum (16 bits)

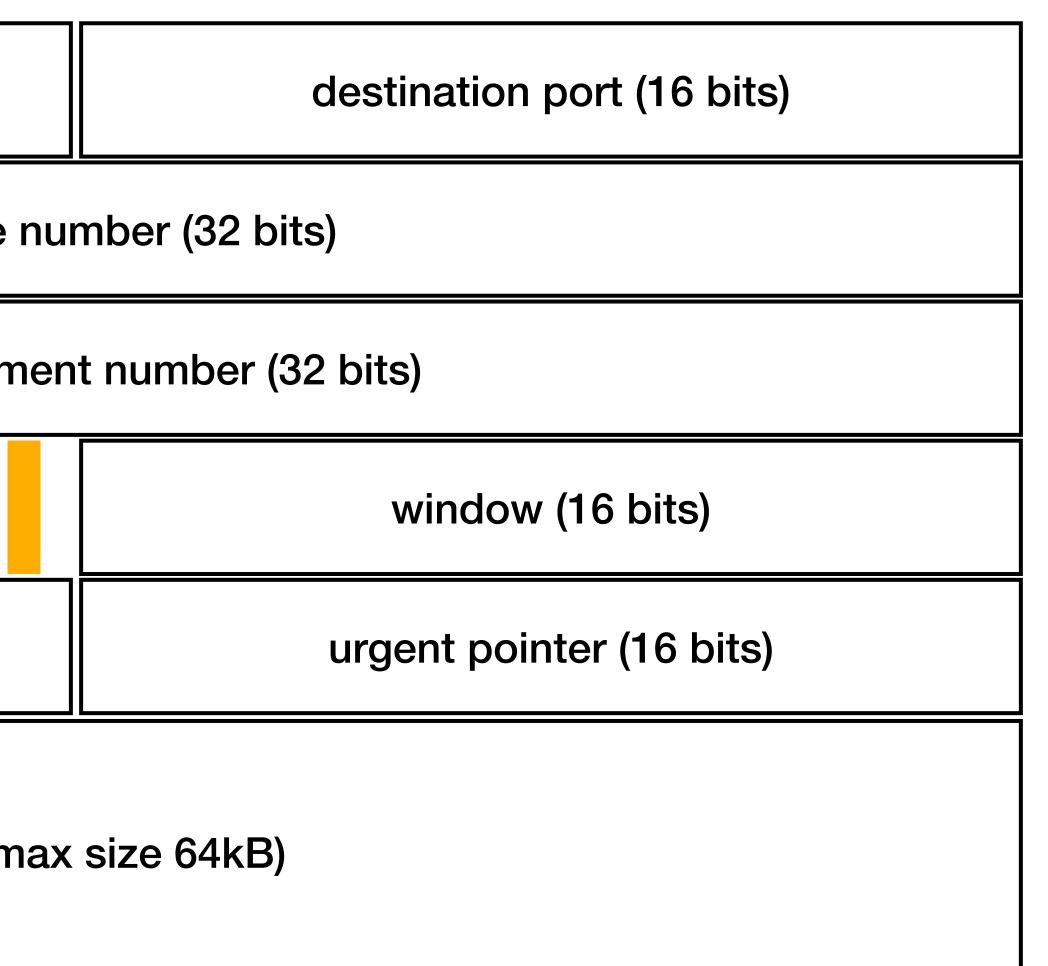

data! (max size 64kB)

Transport Layer, TCP

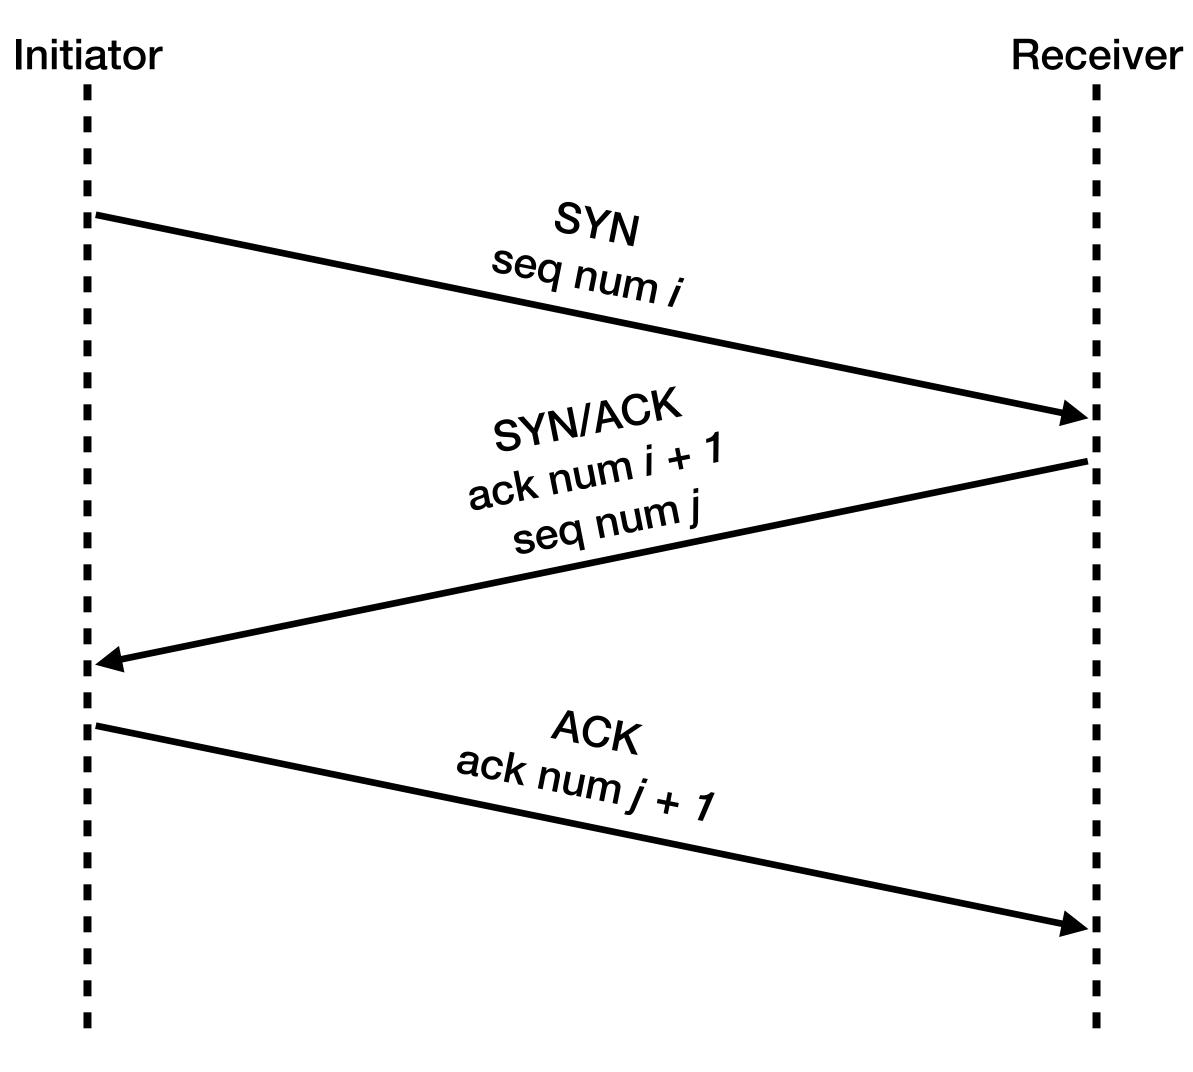

source port (16 bits)		
	sequenc	;e
acknowledger		
offset (4 bits)	reserved (4 bits)	
checksum (16 bits)		
	data!	(n

Transport Layer, TCP

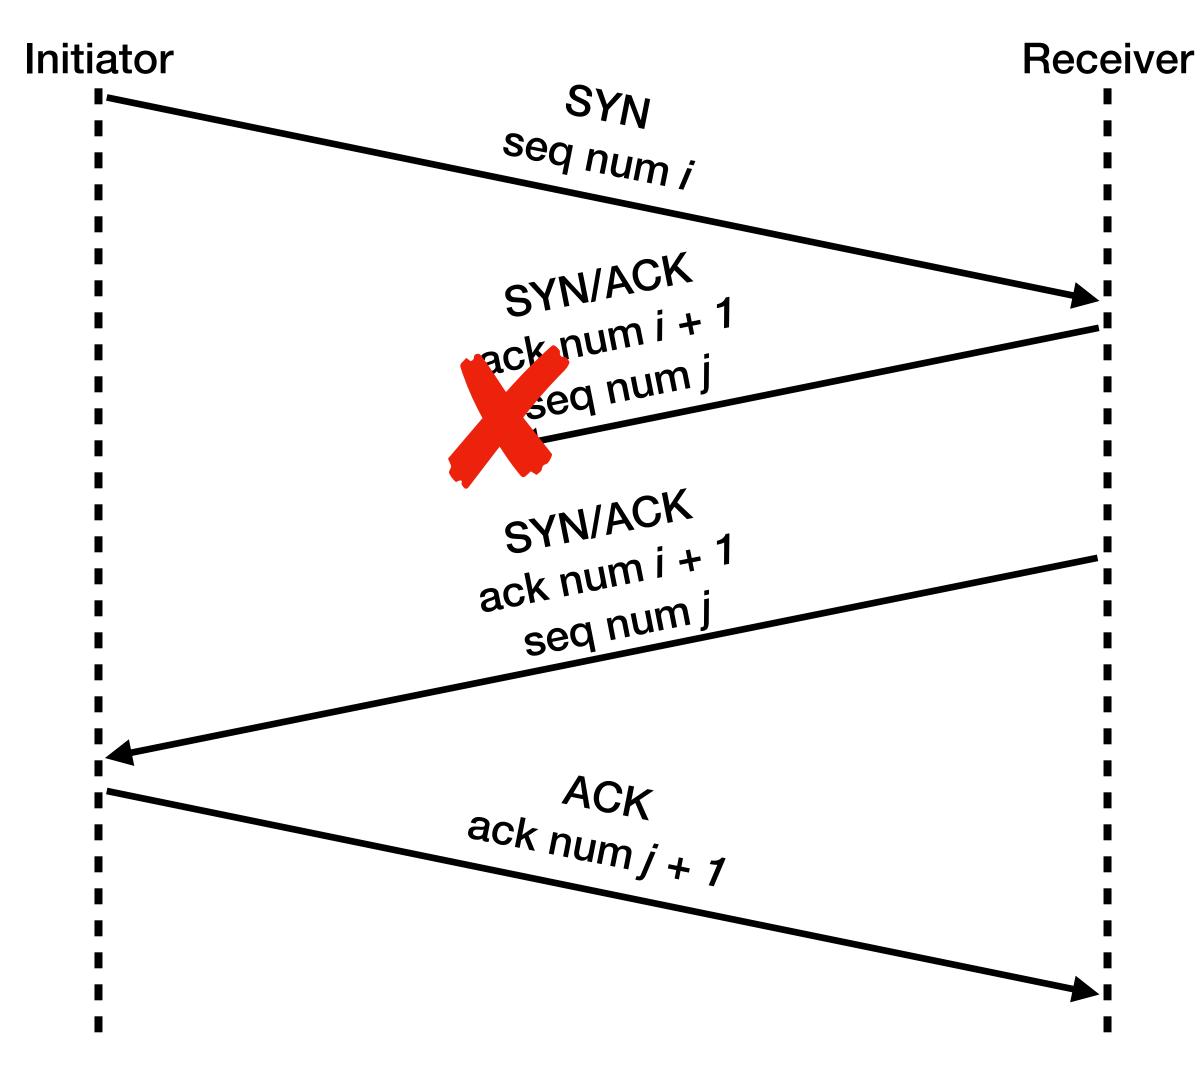

CS105, Fall 2024

Part 3: Protocols for Networking

Transport Layer, TCP

CS105, Fall 2024

Part 3: Protocols for Networking

Transport Layer

- Allows application layer requests/responses to be broken up into packets
- UDP: simple, doesn't handle unreliability well \bullet
- TCP: longer exchanges between sender/receiver, more reliable

Part 3: Protocols for

Data Encapsulation Layers

TCP Headers

HTTP Headers

CS105, Fall 2024

Part 3: Protocols for

But where to send it?

Data!

ТСР Headers

Headers

Data!

Internet Layer

- Tells transport layer where to send the packet!
- For outgoing packets, select the next-hop host and transmit transmit it!
- For incoming packets, capture the packet and pass the payload to the transport layer if we are the destination
- Examples:
 - IPv4
 - IPv6

CS105, Fall 2024

Network Layer, IPv4

	source ip
	destination
zeros (8 bits)	protocol (8 bits)
	data! (n

CS105, Fall 2024

Part 3: Protocols for Networking

address (32 bits)

ip address (32 bits)

header size (16 bits)

max size 64kB)

Data Encapsulation Layers

IPv4 Headers

TCP Headers

CS105, Fall 2024

Part 3: Protocols for

Chat with your neighbor!

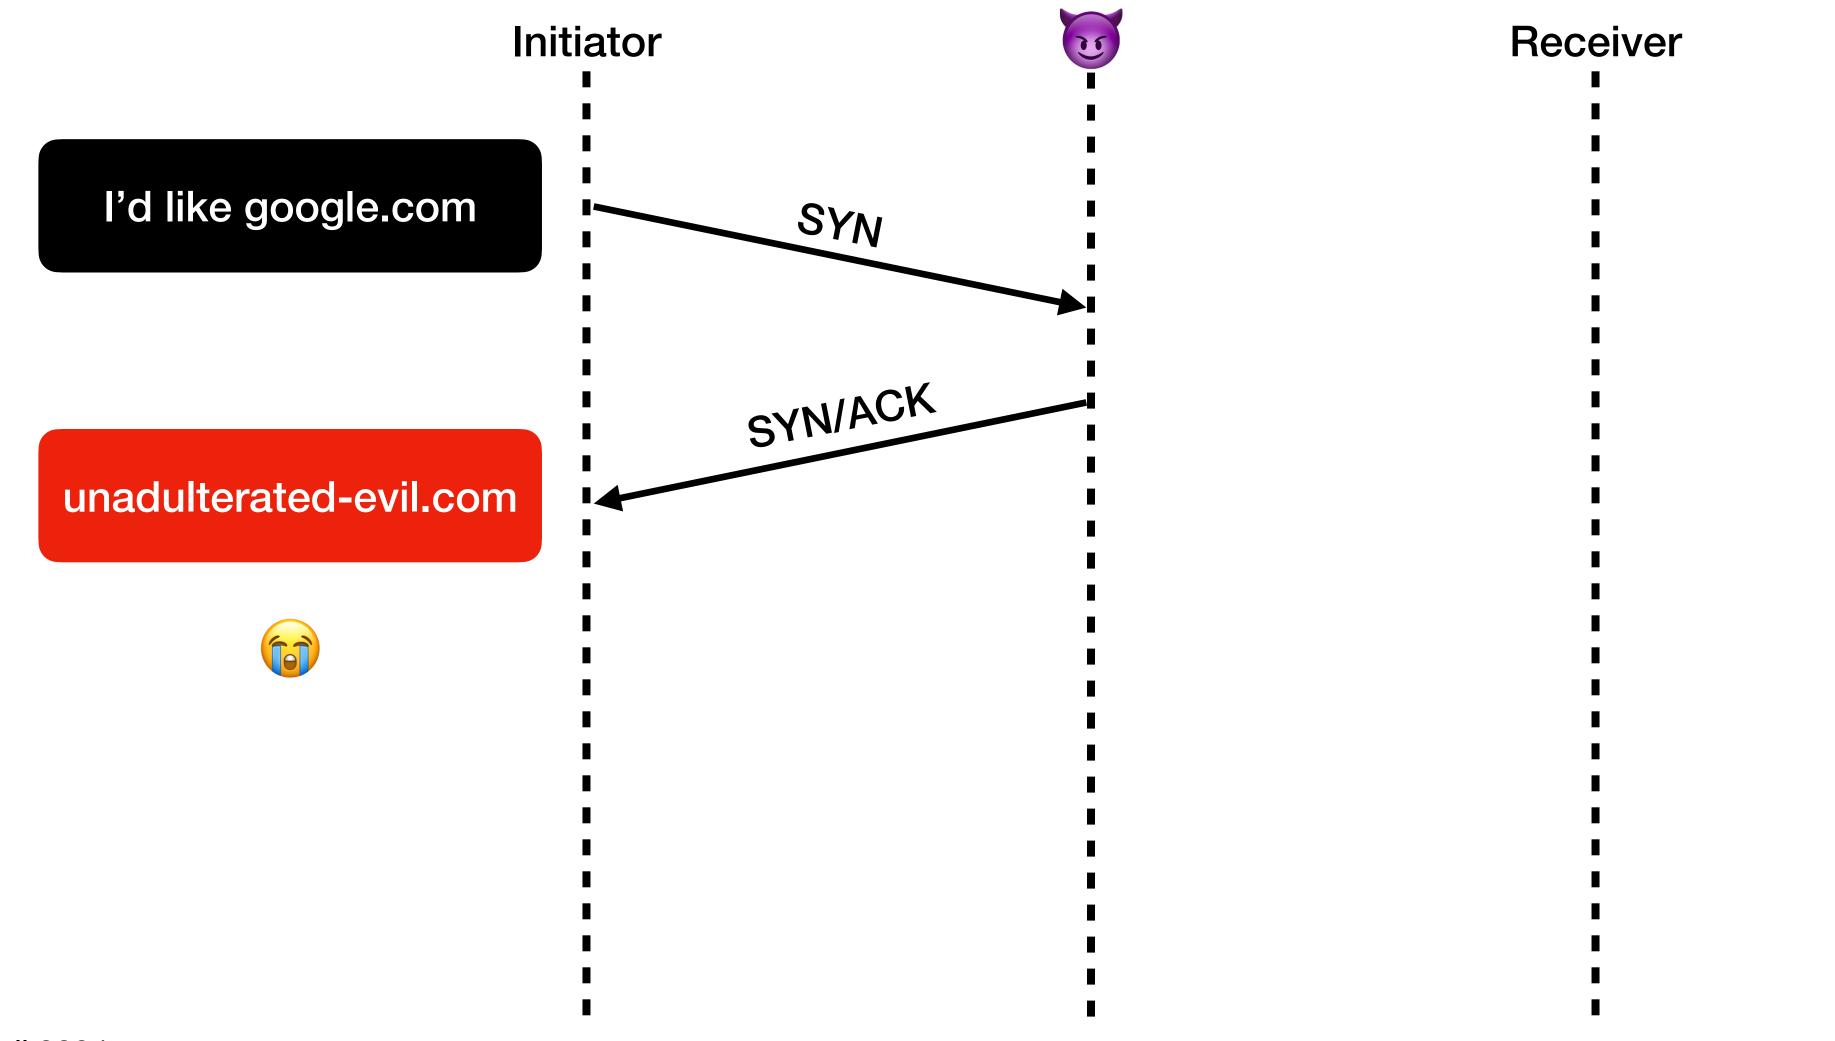

Summarize the conversation about data encapsulation. Why do we encapsulate data that we send on the network?

CS105, Fall 2024

Part 3: Protocols for

Uh oh...

CS105, Fall 2024

Part 3: Protocols for Networking

The Case for HTTPS

- All HTTP packets are encrypted using TLS (Transport Layer Security)
- In order to encrypt/decrypt a packet, the server provides a certificate to a certificate authority
- For more, here's a great video of how the protocol works!
 - https://www.youtube.com/watch?v=YEBfamv-_do

Part 3: Protocols for
