

# Lecture 11: Authentication Protocols (cont'd)

CS 138

Spring 2026

I'VE DISCOVERED A WAY TO GET COMPUTER SCIENTISTS TO LISTEN TO ANY BORING STORY.

# Review: Authentication

- **Threat:** attacker who controls the network
  - Dolev-Yao model: attacker can read, modify, delete messages
- **Vulnerability:** communication channel between sender and receiver can be controlled by other principals
- **Harm:** attacker can pretend to be someone else (violating security goals)
- **Countermeasure:** authentication protocols

# Review: Authentication Protocols

- An **authentication protocol** allows a principal receiving a message to verify the identity of the principal that sent that message

# Secure Authentication Protocols

## Multiple Keys

1.  $B \rightarrow T: B, r$ 
  - 1)  $T \rightarrow B: A, r$
  - 2)  $B \rightarrow T: B, \text{Enc}(r; k_{BA})$
2.  $T \rightarrow B: A, \text{Enc}(r; k_{BA})$

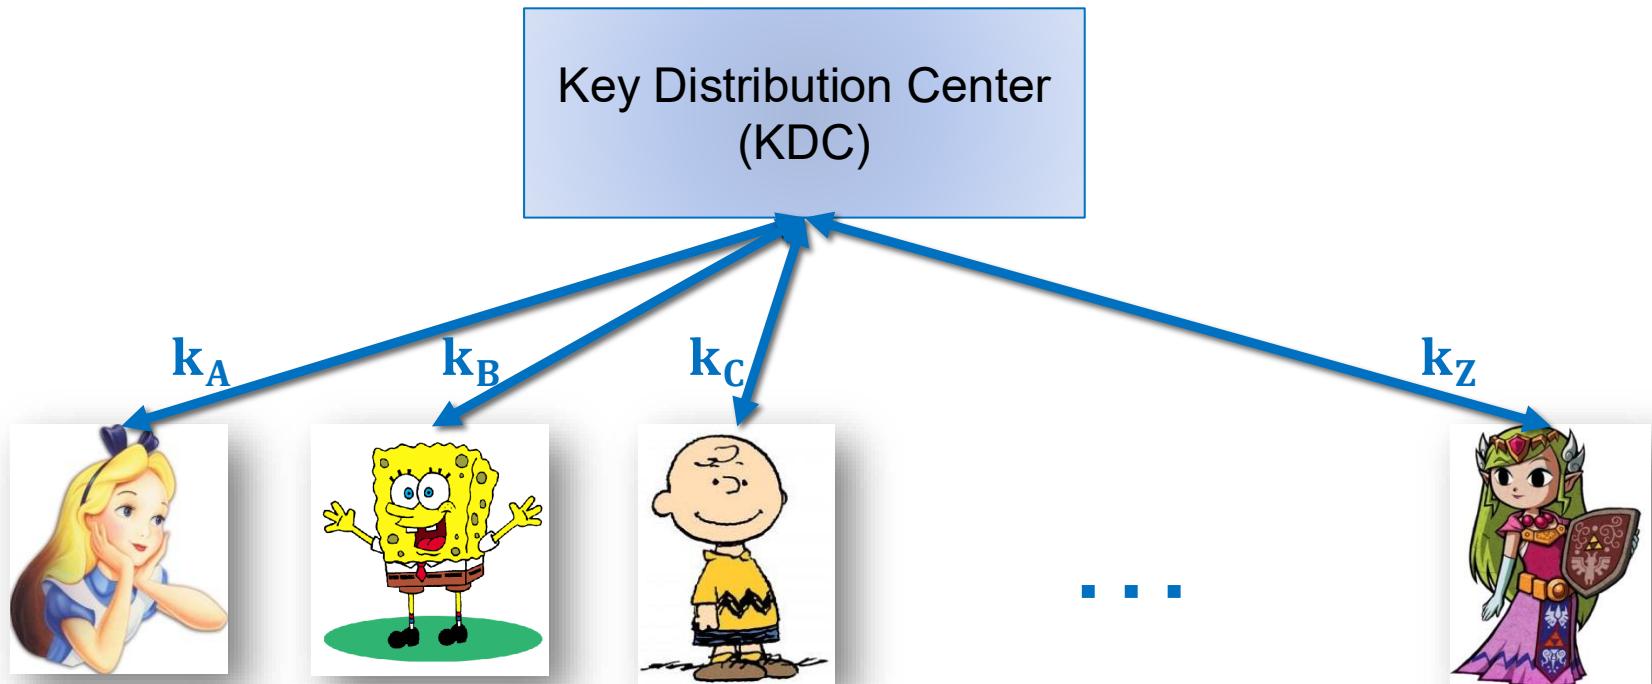

## Included Identity

1.  $B \rightarrow T: B, r$ 
  - 1)  $T \rightarrow B: A, r$
  - 2)  $B \rightarrow T: B, \text{Enc}(B, r; k)$
2.  $T \rightarrow B: A, \text{Enc}(B, r; k)$

# Assumptions

- ~~Assume Alice and Bob have a shared secret key  $k$~~
- Assume that symmetric-key crypto works
- Assume there is a trusted **Key Distribution Center (KDC)** and that all principals have a shared key with the KDC

# Goals

- Alice should be convinced that she is talking to Bob
- Bob should be convinced that he is talking to Alice
  
- Alice and Bob should acquire a shared key that they can use to securely communicate

# Protocol 1

1.  $A \rightarrow KDC: A, B$
2.  $KDC \rightarrow A: A, B, Enc(k; k_A)$
3.  $KDC \rightarrow B: A, B, Enc(k; k_B)$

# Protocol 2

1.  $A \rightarrow KDC: A, B$
2.  $KDC \rightarrow A: A, B, \text{Enc}(k; k_A), \text{Enc}(k; k_B)$
3.  $A \rightarrow B: A, B, \text{Enc}(k; k_B)$

# Threat Model

- Dolev-Yao attacker
  - controls the network, can read, modify, create packets
- A **replay attack** occurs when an adversary repeats fragments of a previous protocol run
- ~~A **reflection attack** occurs when an adversary sends messages from an ongoing protocol back to the originator~~
- A **man-in-the-middle attack** occurs when an adversary secretly relays (and potentially changes) communications between two principals who believe they are communicating directly with each other

# Exercise 1: Replay Attacks

Is this protocol vulnerable to a replay attack?

1.  $A \rightarrow KDC: A, B$
2.  $KDC \rightarrow A: A, B, \text{Enc}(k; k_A), \text{Enc}(k; k_B)$
3.  $A \rightarrow B: A, B, \text{Enc}(k; k_B)$

# Protocol 3

1.  $A \rightarrow KDC: A, B, r$
2.  $KDC \rightarrow A: A, B, \text{Enc}(k, r; k_A), \text{Enc}(k; k_B)$
3.  $A \rightarrow B: A, B, \text{Enc}(k; k_B)$

Is this protocol vulnerable to a replay attack?

# MITM Attack

1. A  $\rightarrow$  T: A, B, r

1) T  $\rightarrow$  KDC: A, T, r

2) KDC  $\rightarrow$  T: A, T, Enc(k, r; k\_A), Enc(k; k\_T)

1) T  $\rightarrow$  KDC: T, B, r

2) KDC  $\rightarrow$  T: T, B, Enc(k2, r; k\_T), Enc(k2; k\_B)

2. T  $\rightarrow$  A: A, B, Enc(k, r; k\_A), Enc(k2; k\_B)

3. A  $\rightarrow$  B: A, B, Enc(k2; k\_B)

# Protocol 4

1.  $A \rightarrow KDC: A, B, r$
2.  $KDC \rightarrow A: A, B, \text{Enc}(k, r, \text{Enc}(k; k_B)); k_A$
3.  $A \rightarrow B: A, B, \text{Enc}(k; k_B)$

# Attack on Protocol 4

1.  $T \rightarrow KDC: T, B, r$
2.  $KDC \rightarrow T: T, B, Enc(k, r, Enc(k; k_B); k_T)$
3.  $T \rightarrow B: A, B, Enc(k; k_B)$

# Protocol 5

1.  $A \rightarrow KDC: A, B, r$
2.  $KDC \rightarrow A: A, B, Enc(k, r, Enc(A, B, k; k_B)); k_A$
3.  $A \rightarrow B: A, B, Enc(A, B, k; k_B)$

# Attack on Protocol 5

1. A  $\rightarrow$  T: A, B, r
  1. T  $\rightarrow$  KDC: A, T, r
  2. KDC  $\rightarrow$  T: A, T,  $\text{Enc}(k, r, \text{Enc}(A, T, k; k_T); k_A)$
2. T  $\rightarrow$  A: A, B,  $\text{Enc}(k, r, \text{Enc}(A, T, k; k_T); k_A)$
3. A  $\rightarrow$  T: A, B,  $\text{Enc}(A, T, k; k_T)$

# Protocol 6

1.  $A \rightarrow KDC: A, B, r$
2.  $KDC \rightarrow A: Enc(A, B, k, r, Enc(A, B, k; k_B); k_A)$
3.  $A \rightarrow B: A, B, Enc(A, B, k; k_B)$

# Protocol 7: Needham-Schroeder

1. A  $\rightarrow$  KDC: A, B, r
2. KDC  $\rightarrow$  A: Enc(A, B, k, r, Enc(A, B, k; k\_B); k\_A)
3. A  $\rightarrow$  B: A, B, Enc(A, B, k; k\_B)
4. B  $\rightarrow$  A: A, B, Enc(r2; k)
5. A  $\rightarrow$  B: A, B, Enc(r2+1; k)

# Exercise 2: MITM Attacks

Consider the following variant of Needham-Schroeder. Is this protocol vulnerable to a MITM attack?

1.  $A \rightarrow KDC: A, B, r$
2.  $KDC \rightarrow A: Enc(A, B, r; k_A), Enc(r, k; k_A)$
3.  $KDC \rightarrow B: Enc(A, B, r; k_B), Enc(r, k; k_B)$
4.  $B \rightarrow A: A, B, Enc(r^2; k)$
5.  $A \rightarrow B: A, B, Enc(r^{2+1}; k)$

# Exercise 2: MITM Attacks

Consider the following variant of Needham-Schroeder. Is this protocol vulnerable to a MITM attack?

# Protocol 7: Needham-Schroeder

1. A  $\rightarrow$  KDC: A, B, r
2. KDC  $\rightarrow$  A: Enc(A, B, k, r, Enc(A, B, k; k\_B); k\_A)
3. A  $\rightarrow$  B: A, B, Enc(A, B, k; k\_B)
4. B  $\rightarrow$  A: A, B, Enc(r2; k)
5. A  $\rightarrow$  B: A, B, Enc(r2+1; k)

# Solution #1: More random numbers

1. A  $\rightarrow$  B: A, B
2. B  $\rightarrow$  A: A, B, r3
3. A  $\rightarrow$  KDC: A, B, r, r3
4. KDC  $\rightarrow$  A: Enc(A, B, k, r, Enc(A, B, k, r3; k\_B); k\_A)
5. A  $\rightarrow$  B: A, B, Enc(A, B, k, r3; k\_B)
6. B  $\rightarrow$  A: A, B, Enc(r2; k)
7. A  $\rightarrow$  B: A, B, Enc(r2+1; k)

# Solution #2: Timestamps

1. A  $\rightarrow$  KDC: A, B, r,
2. KDC  $\rightarrow$  A: Enc(A, B, k, r, Enc(A, B, k, t; k\_B); k\_A)
3. A  $\rightarrow$  B: A, B, Enc(A, B, k, t; k\_B)
4. B  $\rightarrow$  A: A, B, Enc(r2; k)
5. A  $\rightarrow$  B: A, B, Enc(r2+1; k)

# Solution #3: Otway-Rees

1. A  $\rightarrow$  B:  $n, A, B, \text{Enc}(r1, n, A, B; k_A)$
2. B  $\rightarrow$  KDC:  $n, A, B, \text{Enc}(r1, n, A, B; k_A),$   
 $\text{Enc}(r2, n, A, B; k_B)$
3. KDC  $\rightarrow$  B:  $n, \text{Enc}(r1, k; k_A),$   
 $\text{Enc}(r2, k; k_B)$
4. B  $\rightarrow$  A:  $n, \text{Enc}(r1, k; k_A)$

# Type Attack

1. A  $\rightarrow$  B: n, A, B, Enc(r1, n, A, B; k\_A)
2. B  $\rightarrow$  KDC: n, A, B, Enc(r1, n, A, B; k\_A),  
Enc(r2, n, A, B; k\_B)
3. T  $\rightarrow$  B: n, Enc(r1, n, A, B; k\_A),  
Enc(r2, n, A, B; k\_B)
4. B  $\rightarrow$  A: n, Enc(r1, n, A, B; k\_A)

# Exercise 3: Type Attacks

Consider the following variant of Otway-Rees

1.  $A \rightarrow B: n, A, B, \text{Enc}(r1, n, A, B; k_A)$
2.  $B \rightarrow \text{KDC}: n, A, B, \text{Enc}(r1, n, A, B; k_A),$   
 $\text{Enc}(r2, n, A, B; k_B)$
3.  $\text{KDC} \rightarrow B: n, \text{Enc}(r1+1, k; k_A),$   
 $\text{Enc}(r2+1, k; k_B)$
4.  $B \rightarrow A: n, \text{Enc}(r1+1, k; k_A)$

Would this protocol be vulnerable to a type attack?
