CS140 - Group Assignment 9
Due: Friday, Nov. 18 at 11:59pm

1. The max-flow graphs must have certain constraints. How would you verify these constraints? Specifically, how would you verify that every vertex is on a path from s to t?

2. Work through 1a on Assignment 10 as a group.

3. How was the checkpoint? Was it easier/harder than the last two? Were there any surprises?

4. Who attended your group session?
