### Fibonacci: a first attempt

```

FIBONACCI(n)
1 if n = 1 or n = 2
2     return 1
3 else
4     return FIBONACCI(n - 1) + FIBONACCI(n - 2)
    
```

7

### Running time

```

FIBONACCI(n)
1 if n = 1 or n = 2
2     return 1
3 else
4     return FIBONACCI(n - 1) + FIBONACCI(n - 2)
    
```

Each call creates two recursive calls

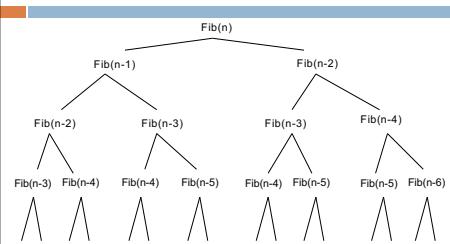

Each call reduces the size of the problem by 1 or 2:  
 $T(n) = T(n - 1) + T(n - 2) + O(1)$

Creates a full binary of depth n (where the shortest leaf is at depth  $n/2$ )

$O(2^n)$

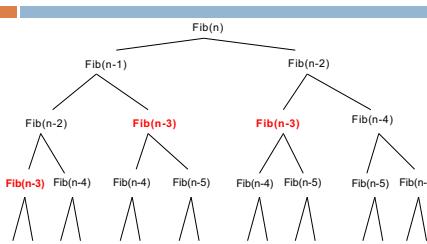

8

### Can we do better?

9

### A lot of repeated work!

10

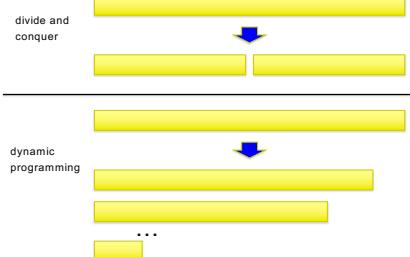

### Identifying a dynamic programming problem

The solution can be defined with respect to solutions to subproblems

The subproblems created are *overlapping*, that is we see the same subproblems repeated

11

### Overlapping sub-problems

12

### Dynamic programming: steps

**recursive definition:** use this to recursively define the value of an optimal solution

**DP solution:** describe the dynamic programming table:
 

- size, initial values, order in which it's filled in, location of solution

**Analysis:** analyze space requirements, running time

14

### Recursive definition

Define a function and *clearly* define the inputs to the function

The function definition should be *recursive* with respect to *multiple subproblems*

- pretend like you have a working function, but it only works on smaller problems

Key: subproblems will be *overlapping*, i.e., inputs to subproblems will not be disjoint

17

### Recursive definition

Fibonacci:

$$F(n) = ?$$

18

### Recursive definition

Fibonacci:

$$F(n) = F(n-1) + F(n-2)$$

19

### DP solution

The recursive solution will generally be top-down, i.e., working from larger problems to smaller

DP solution:

- work bottom-up, from the smallest versions of the problem to the largest
- store the answers to subproblems in a table (often an array or matrix)
- to build bigger problems, lookup solutions in the table to subproblems

20

### DP solution

$$F(n) = F(n-1) + F(n-2)$$

What are the smallest possible values (subproblems)?

To calculate  $F(n)$ , what are all the subproblems we need to calculate? This is the “table”.

How should we fill in the table?

21

### DP solution

$$F(n) = F(n-1) + F(n-2)$$

What are the smallest possible values (subproblems)?  $F(1) = 1, F(2) = 1$

To calculate  $F(n)$ , what are all the subproblems we need to calculate? This is the “table”.  $F(1) \dots F(n-1)$

How should we fill in the table?  $F(1) \rightarrow F(n)$

22

### DP solution

```
FIBONACCI-DP(n)
1 fib[1] ← 1
2 fib[2] ← 1
3 for i ← 3 to n
4     fib[i] ← fib[i - 1] + fib[i - 2]
5 return fib[n]
```

Store the intermediary values in an array (fib)

23

### Analysis

```
FIBONACCI-DP(n)
1 fib[1] ← 1
2 fib[2] ← 1
3 for i ← 3 to n
4     fib[i] ← fib[i - 1] + fib[i - 2]
5 return fib[n]
```

Space requirements?

Running time?

24

### Analysis

```
FIBONACCI-DP(n)
1 fib[1] ← 1
2 fib[2] ← 1
3 for i ← 3 to n
4     fib[i] ← fib[i - 1] + fib[i - 2]
5 return fib[n]
```

Space requirements:  $\Theta(n)$

Running time:  $\Theta(n)$

25

**Counting binary search trees**

How many unique binary search trees can be created using the numbers 1 through n?

```

graph TD
    4((4)) --- 2((2))
    4 --- 5((5))
    2 --- 1((1))
    2 --- 3((3))
    5 --- 6((6))
  
```

26

**Step 1: What is the subproblem?**

Assume we have a working function (call it T) that can give us the answer to smaller subproblems

How can we use the answer from this to answer our question?

How many options for the root are there?

27

**Subproblems**

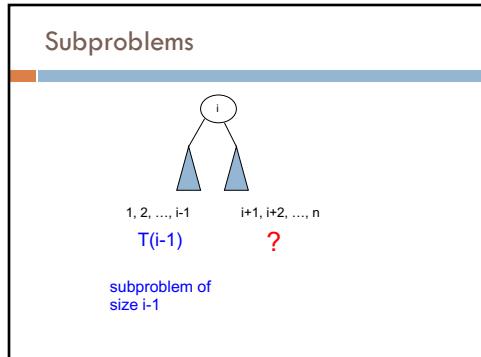

How many trees have i as the root?

28

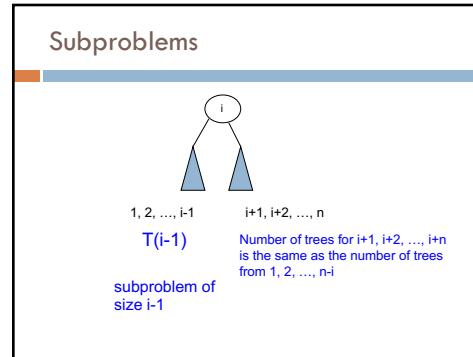

**Subproblems**

1, 2, ..., i-1      i+1, i+2, ..., n  
?

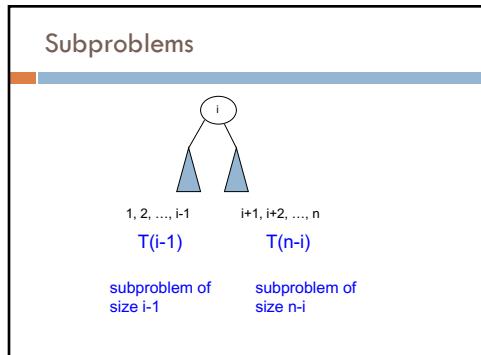

29

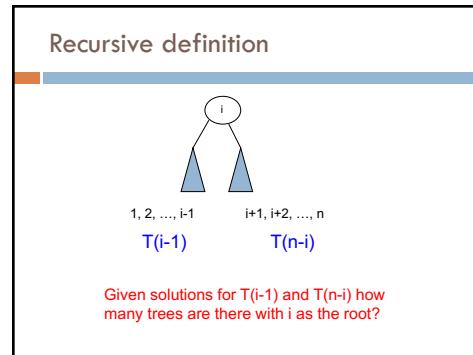

30

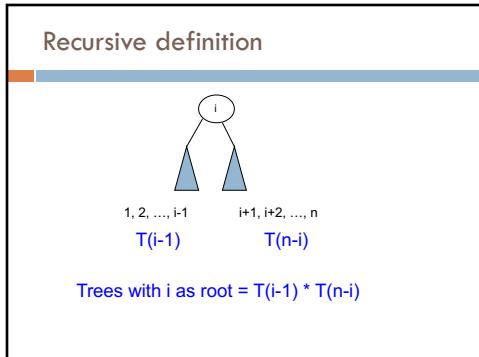

31

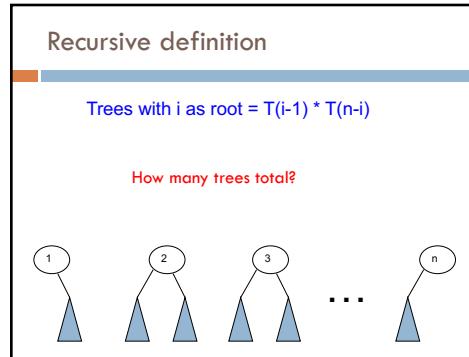

32

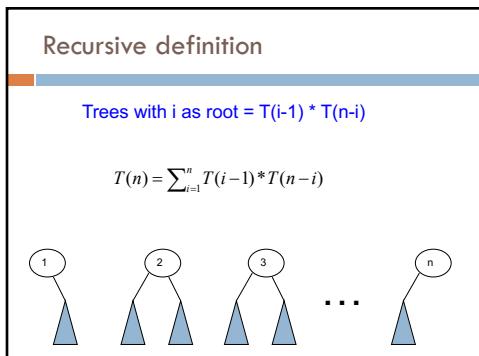

35

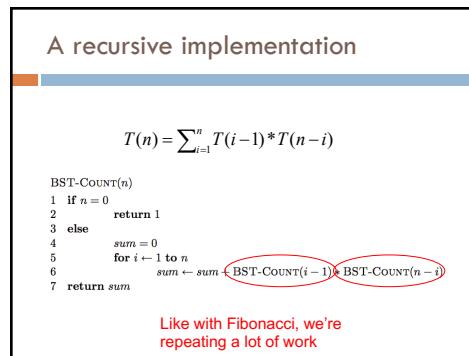

36

37

38

39

### DP solution (from the bottom-up)

$$T(n) = \sum_{i=1}^n T(i-1) * T(n-i)$$

What are the smallest possible subproblems?

To calculate  $T(n)$ , what are all the subproblems we need to calculate? This is the “table”.

How should we fill in the table?

40

### DP solution (from the bottom-up)

$$T(n) = \sum_{i=1}^n T(i-1) * T(n-i)$$

What are the smallest possible subproblems?

$T(0)=1, T(1) = 1$

Why do we need  $T(0)$  and why is it 1?

41

### DP solution (from the bottom-up)

$$T(n) = \sum_{i=1}^n T(i-1) * T(n-i)$$

What are the smallest possible subproblems?  
 $T(0)=1, T(1) = 1$

Need to think carefully about  
base cases/edge cases

42

### DP solution (from the bottom-up)

$$T(n) = \sum_{i=1}^n T(i-1) * T(n-i)$$

What are the smallest possible subproblems?  
 $T(0)=1, T(1) = 1$

To calculate  $T(n)$ , what are all the subproblems we need to calculate? This is the “table”.  $T(0) \dots T(n-1)$

How should we fill in the table?  $T(0) \rightarrow T(n)$

43

### DP solution (from the bottom-up)

```
BST-COUNT(n)
1 if n = 0
2   return 1
3 else
4   sum = 0

Given two sequences X =  $x_1, x_2, \dots, x_n$  and Y =  $y_1, y_2, \dots, y_n$

*What is the longest common subsequence?*

X = A B C B D A B

Y = B D C A B A

65

### Recursive solution

X = A B C B D A B

Y = B D C A B A

Assume you have a solver for smaller problems

68

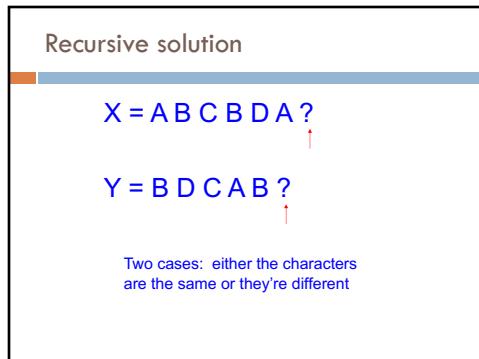

### Recursive solution

X = A B C B D A ?

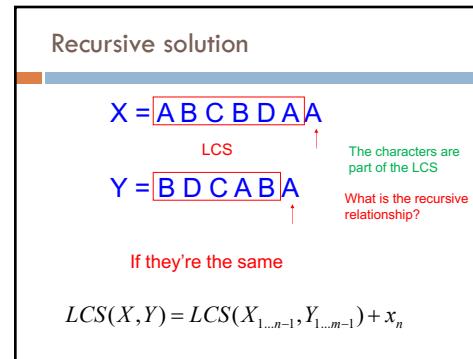

Y = B D C A B ?

Is the last character part of the LCS?

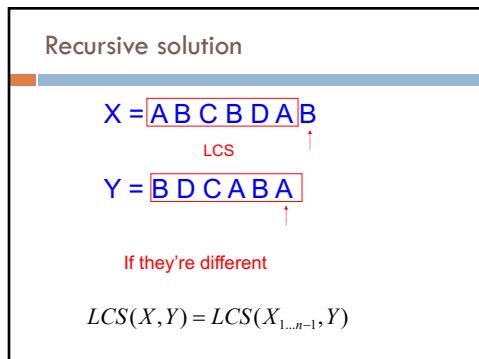

69

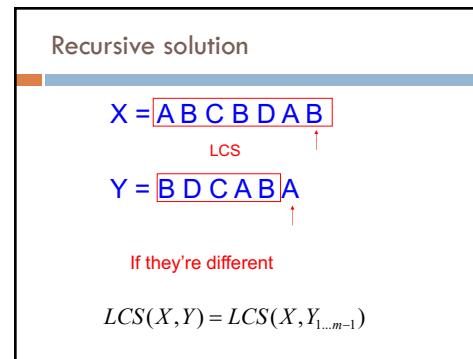

70

71

72

73

Recursive solution

$X = \boxed{A B C B D A B}$

$Y = \boxed{B D C A B A}$

$X = \boxed{A B C B D A B}$

$Y = \boxed{B D C A B A}$

If they're different ?

74

Recursive solution

$X = A B C B D A B$

$Y = B D C A B A$

$LCS(X, Y) = \begin{cases} 1 + LCS(X_{1..n-1}, Y_{1..m-1}) & \text{if } x_n = y_m \\ \max(LCS(X_{1..n-1}, Y), LCS(X, Y_{1..m-1})) & \text{otherwise} \end{cases}$

(for now, let's just worry about counting the length of the LCS)

75

DP solution

$LCS(X, Y) = \begin{cases} 1 + LCS(X_{1..n-1}, Y_{1..m-1}) & \text{if } x_n = y_m \\ \max(LCS(X_{1..n-1}, Y), LCS(X, Y_{1..m-1})) & \text{otherwise} \end{cases}$

What types of subproblem solutions do we need to store?

$LCS(X_{1..j}, Y_{1..k})$

two different indices

76

DP solution

$LCS(X, Y) = \begin{cases} 1 + LCS(X_{1..n-1}, Y_{1..m-1}) & \text{if } x_n = y_m \\ \max(LCS(X_{1..n-1}, Y), LCS(X, Y_{1..m-1})) & \text{otherwise} \end{cases}$

What types of subproblem solutions do we need to store?

$LCS(X_{1..j}, Y_{1..k})$

$LCS[i, j] = \begin{cases} 1 + LCS[i-1, j-1] & \text{if } x_i = y_j \\ \max(LCS[i-1, j], LCS[i, j-1]) & \text{otherwise} \end{cases}$

77

$LCS[i, j] = \begin{cases} 1 + LCS[i-1, j-1] & \text{if } x_i = y_j \\ \max(LCS[i-1, j], LCS[i, j-1]) & \text{otherwise} \end{cases}$
