1. Revisit Problem 1 from Assignment 7. If you wanted to actually generate the solution, i.e., how to actually break up the string into words:

   (a) What additional information would you need to store?
   (b) Once you finish filling in the table(s), how would you actually generate the solution?

2. Work through the first test case for Assignment 8 by hand. What is the minimum penalty and how should the text be broken?

3. What CS courses are you hoping/planning to take next semester? Any questions about classes/major requirements?

4. Group participation Was everyone in the group at the meeting and, if not, who was missing?

5. Optional: submit a group photo :)
